ADO.NET   Language Integrated Query (LINQ)

ASP.NET MVC   Entity Framework

## PROJECT

### Foodtek – Restaurant Ordering Web Application
Associated with AppTrainers (03/2025 - 05/2025)

- A backend-focused web application developed for a single restaurant to manage online orders, deliveries, and menus. I was responsible for developing the backend system using ASP.NET Core and SQL Server, while collaborating with a Flutter developer for the mobile front-end, and 3 QA team members for testing and validation.
- Developed RESTful APIs using ASP.NET Core Web API
- Designed and implemented a normalized SQL Server database
- Built endpoints for Admin, Customer, and Driver modules
- Handled functionalities like order placement, delivery status updates, and customer reviews
- Collaborated closely with a Flutter developer to integrate APIs into the mobile app
- Worked with QA testers to validate features and resolve bugs
- Used Jira for task management and GitHub for version control
- Followed clean architecture and Agile practices for maintainability and team collaboration

### HU Services & Alerts Portal (2019)

- This project is a website provides services to university students by sending notifications via e-mail.
- The notifications include student marks, and attendance and absence records for each student in their personal account.

## COURSES

### DARE ACADEMY, Jordan (04/2024 - 09/2024)
*Full Stack Web Development Course ,Duration: 300 hours . Learned .NET Core and Angular . Built and deployed several full-stack Web applications.*
